COFFEE BREW SUBMISSIONS

WHY MUST I DESIGNATE “BREW” WHEN SUBMITTING COFFEE SAMPLES?

Coffee can be submitted for testing in various physical states – powders, liquid, beans, etc. Most of our analyses can accommodate all of these states, however in some cases results on the “brew” of the solid material may be preferred. If this is the case for your product, the request must be specified in the sample submission paperwork.

HOW DO I SPECIFY “BREW” WHEN SUBMITTING A SAMPLE?

Ensure you select “Coffee Brew Standard Test” when submitting your sample for testing. Be sure to include required supporting information.

The screenshot shows the NQAC web application interface. At the top left is the NQAC logo and name. A navigation bar contains links for Sterility Submission, Cooking Validation Submission, Submission Help Guide, Customer Support, User Dashboard, New Order, and Log Out. Below this is a progress bar with three steps: 'Add Samples & Tests' (highlighted in orange), 'Order & Recipient Details', and 'Review & Submit Order'. The main content area is titled 'Choose tests for search "brew"'. A search bar on the right contains the text 'brew'. Below the search bar is a 'Save & Continue' button. A section titled 'SPECIALIZED TESTS' contains a sub-section 'Other' with a list item 'Coffee Brew Standard'. To the right of this item are links for 'Data Sheet', a refresh icon, and an 'Include' button with a checkmark.

WHAT SUPPORTING INFORMATION NEEDS TO BE INCLUDED?

- Brewer type (e.g., Drip, Keurig, etc.)
- Number of brews to combined prior to sampling for analysis
- Volume of Water and Weight of Ground Coffee, if using Drip Machine
- Any modifications to the “standard brewing conditions” (see below)

NOTE: Additional fees may be incurred for complex requirements. Additional charges will be proactively communicated to the submission owner. Testing will not be started until additional fees are approved.

Standard Brewing Conditions			
Brewer	Number of Brews	Volume of Water (or Final Brew Weight)	Weight of Ground Coffee
<i>Drip Machine</i>	1-5	720 mL	40 g
<i>Keurig</i>	1-5	8 oz	N/A
<i>Other</i>	1-5	Specify in Special Instructions	N/A

WHERE DOES SUPPORTING INFORMATION NEED TO BE ENTERED?

The brewer type, number of brews, volume/weight to brew (if applicable), and any modifications must be entered into the special instructions in the test submission:

Tests

Coffee Brew Standard ✖

Limit or Level: ▼

Value/Unit of Measure:

Quantity:

Enter brewer type, # of brews, volume/weight to brew, and any modifications to standard brewing conditions.
